Education

University of Waterloo

Bachelor of Computer Science, Honours, Co-op

Waterloo, Canada

Expected May 2028

Experience

Microsoft

Redmond, Washington

Software Engineer Intern, Azure GPU Infrastructure

May - Aug. 2026

- **Saved over \$1M annually in GPU provisioning test infrastructure** by replacing physical **NVIDIA GPU test servers** with an **~\$80/month** Azure virtual lab, eliminating the need to refresh physical test hardware for each new GPU generation
- Emulated bare-metal GPU nodes as KVM/QEMU VMs with per-node Redfish BMC emulators, PXE/DHCP networking, UEFI boot, and NVMe RAID0 storage, so production tooling treated them as physical servers
- Shipped a CI/CD pipeline that provisions **reproducible, isolated virtual racks** in **~30 minutes** using Bicep and cloud-init, eliminating shared-hardware bottlenecks by enabling engineers to spin up environments on demand and test in parallel

Microsoft

Redmond, Washington

Software Engineer Intern, Azure VMware Solutions

Sep. - Dec. 2025

- Reduced mitigation time for common Azure VMware Solution incidents from **7 days to under 1 day** and support escalations from **50% to 27%** by shipping a self-serve diagnostic experience across **thousands of VMs**
- Halved deployments required for diagnostic changes from **2 to 1** by making the UI schema-agnostic, enabling backend fields to ship without frontend releases

Commure

Mountain View, California

Software Engineer Intern

May - Aug. 2025

- Automated fax delivery for **90K+ completed patient forms daily**, replacing manual faxing with rules-based routing, idempotent retries, and audit logs, saving **hundreds of operations hours per month**
- Built and launched a Twilio-backed patient messaging platform used by **1,000+ clinics** and **millions of patients**
- Saved support teams **100+ hours/week** by shipping an in-app Zendesk tool that captured diagnostic context and screenshots for faster triage

Athelas

Mountain View, California

Software Engineer Intern

Sep. - Dec. 2024

- Accelerated file downloads by **94%**, from **4 min to 15 sec**, by parallelizing PostgreSQL queries in the RCM platform
- Reduced filter implementation time by **85%** by building a centralized filtering system serving **500+ healthcare facilities**
- Cut cache integration time by **90%** by building a reusable cookie-backed caching library for React and Vue, eliminating duplicated logic across the codebase

WSIB Ontario

Waterloo, Canada

Full-Stack Developer Intern

Jan. - Apr. 2024

- Led **6 engineers** to build and deploy an end-to-end, **GPT-4**-powered platform that automatically converted lengthy, jargon-heavy documents into plain-language summaries for **4,000+ employees** using React, Flask, and AWS
- Engineered a call analytics pipeline for **30K+ monthly calls** using OpenAI Whisper and Azure AI to transcribe conversations, measure customer sentiment, and identify recurring service issues
- Built a physiotherapy assessment system that tracked **33 body landmarks across 100+ exercises** using Python, OpenCV, and MediaPipe to measure joint angles, exercise form, and patient range of motion

Toolbx

Toronto, Canada

Software Engineer Intern

May - Aug. 2023

- Automated **10,000+ monthly sales quotes** by building a **TypeScript** RPA system with **Google Cloud Vision** that replicated manual Windows workflows, reducing operational effort, costs, and quoting errors
- Improved web application and REST API performance by **25%** by optimizing PostgreSQL queries and data-access patterns

Technical Skills

Languages Python, TypeScript, JavaScript, C, C++, C#, Java, Go, Rust, SQL, Bash

Technologies Azure, AWS, Google Cloud Platform (GCP), Bicep, KQL, Docker, Kubernetes, libvirt/KVM/QEMU, Redis, PostgreSQL, MongoDB, Node.js, React, Vue, Next.js, Flask, REST APIs, Linux, Git
